

Banking Excellence

A collection of software enables the bank to offer its products on the branch network of another institution. By online integration of the banking services module with the banking information system (BIS), it is possible to offer customers all services and products as it is possible directly in a bank branch: opening accounts for individuals and legal entities, cash deposits and withdrawals, non-cash operations. It is also possible to apply for a loan, use the services of EUROGIRO and many other products of this bank. Since the data is transmitted online and verified directly in the BIS, the immediate update of the data in the bank is guaranteed, as well as guaranteed security, as in every branch of the bank.

Key Features

- The range of services is the same as in a bank branch
- Comprehensive range of products
- Immediate transfer of data as if the operation were carried out directly in the bank
- The ability to provide selected services even when the IS bank is partially unavailable

Main Advantages

- Full online integration
- Security guaranteed by BIS
- Real-time communication
