

Banking Module

Thanks to **Banking services module**, the bank is able to provide its products using counter infrastructure of other institution. It is possible to offer customers all services and products just as they are offered at a bank office via on-line integration of the banking services module with banking information system (BIS): opening accounts for individuals and corporations, cash deposits and withdrawals, non-cash operations. It is also possible to apply for a loan, use EUROGIRO services and many other bank products. And as the data is transferred on-line and verified directly by BIS, instant data update at the bank is ensured without compromising security, which is ensured at the same level as in any other bank's office.

Key Features

- Equal services are provided as in a bank Office
- Complex products offer
- Realtime data transfer, all transactions and operations are instantly taken into effect at the bank system

Main Benefits

- Full on-line integration
- Security provided by BIS
- Realtime communication
