

Retail Sales Module

The retail sales module takes into account the needs of the sale of goods at a large number of points of sale managed and controlled from headquarters. The configuration of types of goods, update of prices, discounts and promotions is done at the headquarters. It is also possible to centrally manage the remittance and removal of goods from sale. Headquarters also has an overview of the current state of the warehouse in all locations, sales and other indicators.

Points of sale download prices and configurations automatically, thus the operator does not need to make any changes. Stock at a particular point of sale is updated in real time, any branch can view billing sales, monthly stocks of goods, turnover and sale indicators.

A follow-up of sale of particular piece is possible for sensitive goods (e.g. SIM cards) – when, where, and by whom it was sold.

Key Features

- Sales support - discounts, promotions
- Overview of the warehouse status in real time
- Detailed records and settlement

Main Benefits

- Centralized sales configuration from a single point
- Reports and evaluation of sales
- Automatic data updates at point of sales
